

Lab 6 – Identity and Admin Pages

CS296N, Web Development 2: ASP.NET

Objectives

Get practice:

- Adding Identity to a web app
- Setting up administrative pages

Instructions

- Add Identity to your web app – use the same database as the one used by your application. Your user will need to inherit from IdentityUser and your user needs to have some properties of its own.
- Add administrative pages to:
 - Add a user
 - List all users
- Add links to navigate between your admin pages.

Submission to Moodle

Beta Version

Upload the following to the Code Review Forum:

1. A zip file containing your Community Info web app's Visual Studio solution folder.
Or, a link to a repository containing your web site solution source code.
2. A code review of your lab partner's work. (You do this after your lab partner submits items 1 and 2 and you review them.)

Production Version

1. Item 1 above but revised as needed.
2. The code review of your work (the one done by your lab partner) with the second column ("Production") completed by you.
